## Push-Palmo

### **PRODUCT:**

Mortise installation exit bar for panic exit locks.

### **APPLICATION:**

The drive mechanism of the Push Palmo mortise lock for fire doors, when used together with the relative locks and accessories, is designed to comply with the standard EN1125 and offers excellent reliability, security and durability. In keeping with its attention to safety, ISEO has decided to add an ANTIGERM treatment to its products. The effect of this antibacterial treatment is permanent, and does not require any special maintenance. The continuous release of silver ions guarantees constant effectiveness throughout the working life of the product, even if the surface is scratched. This makes it particularly suitable for installation in public places and in any other areas where hygiene and healthcare are a basic necessity: hospitals, clinics and nursing homes, as well as crèches and pre-school structures.

### **RANGE:**

A wide variety of accessories for a anti-panic and fire doors is available.

### TECHNICAL FEATURES

Usable together with mortise panic exit/fire door locks and counter-locks with 9 mm square spindle size, with 72 mm centre size and 30° square spindle rotation angle.
